(270 ml / 90-day supply)

**PRODUCT FACTS:** 1 full trigger squeeze per 1,100 lbs body weight once per day

Active ingredients per serving

**Hyaluronic Acid** **30mg**

“Hyaluronic Acid supports a horse's whole body. From their skin and eyes, to muscles, joints, ligaments and tendons. My horses receive daily support from Hyalogic Hyalun<sup>®</sup> PRO. I'm not going to wait until their joints are in trouble to replenish the HA that is used up with every step my horses take.”

– *Natalya Gryson*

**USDF GOLD MEDALIST**  
Still Hill Dressage

Hyalogic<sup>®</sup> was launched with our first product, Synthovial SEVEN<sup>®</sup>, a premium oral Hyaluronic Acid (HA) product for overall joint health. The success of this product in the human joint health market has been phenomenal, and has helped establish us as one of the pioneers and leaders in the field of HA nutritional supplements.

Hyaluronic Acid is a polysaccharide that is ubiquitous in the mammalian tissue, and is found to be crucial for many cellular and body functions. It has been used in the clinical setting for decades. It is such a versatile molecule that has tremendous benefits to so many parts of the body that we have made it our responsibility to introduce other helpful products with HA into the market. Today we have over 50 HA-based supplements and personal care products launched or in development for the benefit of humans, horses, dogs and cats.

Hyalogic<sup>®</sup> thrives because of our unique products and superior customer service. We also believe in educating the public about the benefits of healthy living, and the value of using quality products where we have incorporated this wonderful, water-loving molecule called HA.

# Hyaluronic Acid

## FOR PETS

Hyaluronic Acid (HA) is found naturally in almost every cell in the body, and occurs in high concentrations in specific body locations. In each body location, it serves a different function. Unfortunately, HA also has a half-life (the time it takes for the molecule to get broken down and excreted from the body) of less than 3 days. For this reason, it is imperative that the body continually replenishes itself with HA.

The joints are surrounded by the synovial membrane, which forms a capsule around the ends of the two articulating bones. This membrane secretes a liquid called the synovial fluid, a viscous fluid with the consistency of motor oil. It has many functions, but none more important than providing the elastic shock absorption properties to the joint. Its second most important function in the joint is to carry nutrients to the cartilage and remove waste from the joint capsule. Normally these processes are carried out via the blood vessels, but because cartilage is without blood flow (avascular), the body relies on the Hyaluronic Acid to perform this function.

## JOINT SUPPORT
